## USING YOUR SOFTWARE DIRECTORY

This directory contains five sections. Four indexes (Category Index, TI Category Index, Author Index, and Keyword Index) list all the software packages contained in the fifth section, Program Abstracts.

### INDEXES

All software programs in this directory are classified in one of eight categories (See Table 1). To locate a particular program, you must first determine its category. You may then obtain the titles and associated abstract numbers of all listed software in this category by referring to the Category Index. In this index, programs are listed numerically, by title within each category. Should you find a title which seems to indicate the content you desire, you may then turn to the Program Abstracts section of the directory to review the program. Note: The first two digits of the abstract number for each program indicate its category.

TABLE 1

<u>Category</u>	<u>First Two Digits of Abstract Number</u>
Home Management	01
Personal Finance	10
Youth Education	20
Institutional Education	30
Entertainment	40
Business/Professional	60
Technical Programs and Utilities	70
Other	90

The TI Category Index follows the same rules as the Category Index, but lists TI software only.

The Author Index lists program titles alphabetically by the author's name. This enables you to find the abstract numbers of all the software packages available from a particular author or company.

The Keyword Index lists programs alphabetically according to keywords in the software title which are indicative of program content. After obtaining the abstract number of a program which seems to satisfy your needs, you may review the program in the Program Abstracts section of the directory.

## PROGRAM ABSTRACTS

In the Abstracts section, complete information is given for each program. Below is a sample Program Abstract with its components numbered. Refer to the explanation below the sample for a description of each Abstract component.
